Letter of Recommendation

18 May 2023

I have known Jahid Khan since November 2022 to April 2023, when he joined my lab- Recombinant DNA facility as a trainee.

During his tenure Jahid has learnt DNA extraction, PCR amplification, agarose gel electrophoresis and Sanger sequencing. This exposure has provided him with significant hands-on experience to some basic molecular biology techniques. He is trained at reading sequencing chromatograms using the available software.

Jahid developed a good temperament for research during this six-month period. During his tenure, he has interacted with staff and students from other labs, which sensitized him to research with a human touch and I am sure he understands that research is not primarily a career option but has a far reaching effect as in service to the people and their betterment.

Jahid is a determined student, one who does not mind long hours at the work bench. He is passionate about learning new techniques and understanding new concepts. He has the ability to take positive criticism in his stride.

Jahid got along well with the other members in the lab. He can contribute to work independently as well as a team member. He has abilities to work on himself to improve and develop.

He tells me that he is very interested to train and pursue a career in research.

He is a sincere student with a sense of responsibility and commitment to work. I am confident that given an opportunity he will do well in the graduate program.

I wish him all success and recommend him to your University for higher studies.

Pradnya Kowtal, PhD
