Transforming nature into the next generation of bio-based flexible devices: N using deep eutectic systems

JD Mota-Morales, E Morales-Narváez - Matter, 2021 - Elsevier

This Perspective underscores the use of deep eutectic systems (DESs) as efficient liquid active ingredients (including fully bio-based) and reaction media for biomass exploitation, valorization, and transformation into all-natural functional materials in a nonaqueous ...

Synergic Fabrication of Gold Nanoparticles Embedded Dextran/Silk Sericin Nanomaterials for the Treatment and Care of Wound Healing

P Chen, L Bian, X Hu - Journal of Cluster Science, 2021 - Springer

Gold-loaded nanoparticles are versatile nanomaterials that may be used in wound healing properties. The current study describes a wound dressing formulation focused on Gold-loaded Dextran/Silk Sericin nanoparticles. The Gold-loaded Dextran/Silk Sericin ...

Tendon-bioinspired wavy nanofibrous scaffolds provide tunable anisotropy ar tenogenesis for tendon tissue engineering

S Wu, J Liu, Y Qi, J Cai, J Zhao, B Duan... - Materials Science and ..., 2021 - Elsevier

The development of tendon-biomimetic nanofibrous scaffolds with mesenchymal stem cells may represent a promising strategy to improve the unsatisfactory outcomes of traditional treatments in tendon repair. In the present study, the nanofibrous scaffolds comprised of poly ...

Engineering of cerium oxide loaded chitosan/polycaprolactone hydrogels for healing management in model of cardiovascular surgery

H Dong, W Liang, S Song, H Xue, T Fan, S Liu - Process Biochemistry, 2021 - Elsevier

This study was designed to establish the composition of wound bandages based on Cerium nanoparticle (CeNPs)-loaded chitosan (CS)/polycaprolactone (PCL). The CeNPs hydrogel (Ce-CS/PCL) was fabricated by the Cerium oxide solutions within the CS/PCL matrix. The ...

Immune Response to Silk Sericin–Fibroin Composites: Potential Immunogen and Alternatives for Immunomodulation

BOO Boni, BM Bakadia, AR Osi, Z Shi... - Macromolecular ... - Wiley Online Library

The unique properties of silk proteins (SP), particularly silk sericin (SS) and silk fibroin (SF), have attracted attention in the design of scaffolds for tissue engineering over the past decades. Since SF has good mechanical properties, while SS displays bioactivity, scaffolds ...
